OptANA

Analyzing Tool for Optical Properties of any Freeform Surface

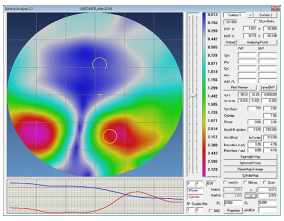

Software tool high precision analyzing of the optical characteristics of any freeform surface.

OptoTech

Datos técnicos

	OptANA
Application	Analyzing Tool for Optical Properties of any Freeform Surface

Características destacadas

- OptANA is an analyzer for precision analyzation of the optical characteristics of any freeform surface
- Up to two surfaces, given in XYZ-data, can be opened and compared simultaneously
- Not only the optical characteristics of a single surface can be displayed, but the accurate differences and divergences compared to another surface
- The ideal analyzer for measuring machines in the optical industry
